

Add intelligence to your restaurant with OrderMatic's new IoT (Internet of Things) **SmartWAVE™** device. **SmartWAVE™** devices work together on the same network to provide audio-visual alerts to help you better manage your store and improve customer experience.

SmartWAVE™

*The New **WAVE** of Technology is Here*

What Can SmartWAVE™ Do for You?

Reduce Customer Wait Times

Has your drive-thru gained too much "wait?" Our ultrasonic drive-thru sensor will eliminate the wait with user-configurable audio and visual alerts.

Watching It When You Can't

Make your restaurant smart and let our device do the work for you. SmartWAVE™ can monitor cold storage temperature, door switches, customer service buttons, and more.

Touchless and Hygienic

A simple wave of the hand acknowledges alerts and reduces glove changing.

Low Installation Cost

Our drive-thru sonar removes the labor-intensive process of cutting concrete required with traditional saw-cut loops.

HARDWARE

- Atmel ARM Cortex M0+ Microcontroller
- 12-volt 2 amp power supply
- RGB LEDs
- Configurable audio and visual alerts
- 2 GB SD storage card (configuration and audio)
- 2 I/O ports
- 10/100 Base T Ethernet port
- Hand wave sensor onboard
- IP40 aluminum and black plastic case 4" x 4" x 1.5"

AVAILABLE I/O

- Temperature sensor
- Ultrasonic presence and ranging sensor
- Presence trigger for communication headset
- Door switch sensor
- Custom sensors (gas leak, water detection, etc)
